J. C. Stormer, Jr. for Dixieland Marine

The purchase and ownership of any used vessel involves the risk of potentially costly defects, which may not be discovered in a marine survey. I understand that the survey report does not constitute a guarantee or warranty of the subject vessel. I have read and hereby agree and consent to the terms and conditions on Page 2 of this agreement.

Client Signature: _____ Date: _____

DIXIELAND MARINE - Survey Agreement - Page 2.

Terms and Conditions of Survey

A Marine Survey is an opinion only. It does not provide a warranty or guarantee of any kind. In no event, shall any liability exceed the cost charged for the survey

Our survey procedures, described below, conform to the common practice for marine surveys by members the Society of Accredited Marine Surveyors and the National Association of Marine Surveyors. Our appraisals follow the rules and standards applicable to personal property appraisals in the **Uniform standards of Professional Appraisal Practice** by the Appraisal Standards Board of the Appraisal Foundation and employ methods recognized by the **American Society of Appraisers**, leading to an educated, unbiased, and defensible opinion.

The following procedures are used in our surveys for the exclusive use of the person named as "Client" on Page 1 of this agreement. The survey is not transferable to any other person or entity and the information provided here is for the use of this client only. Subsequent buyers are excluded as third parties. This agreement specifically excludes any liability of Dixieland Marine or the attending surveyor to any third party.

A condition and valuation survey will include reasonable visual inspection of all vessel parts where accessible, including the apparent condition and safety of these parts and of installed equipment. A written survey report will be prepared after a thorough visual examination of the hull topsides, machinery, rigging, hardware, and equipment. The survey report will include a comprehensive description of the vessel, a statement of the fair market value and replacement value and recommendations for items necessary to reasonably ensure safety and the fitness of the vessel for its intended service. Minor cosmetic issues not materially affecting value may not be addressed.

All normally accessible parts of the vessel will be inspected. Fixed parts will not be removed, including fittings, fasteners, furniture, screwed panels, or joiner-work. Locked compartments and lockers cannot be inspected. Nor will stores and equipment be removed. Owners, sellers, or their representatives (captain, broker, etc.) should make sure that the vessel is prepared for survey with compartments unlocked, stores and excess equipment removed, and maximum access to all areas of the vessel provided.

Machinery, belts, hoses, tanks, and piping will be visually inspected where normally accessible. No disassembly, sampling, destructive testing, chemical or physical analysis, compression or pressure testing or will be performed except by prior arrangement and with written permission of the owner of the vessel. Machinery and equipment may be inspected while operating only when the owner or owner's representative (captain, broker, etc.) is present to operate the machinery. Depending on conditions observed visually, further testing may be recommended. In cases where the condition of engines is critical it is recommended that a qualified marine mechanic be engaged for a separate mechanical survey.

For sailing vessel surveys, spars and rigging will be visually inspected as accessible from on deck, and sails will be inspected as found furled or bagged unless other arrangements are made prior to the survey. Depending on these observations, further inspection may be recommended. Inspections aloft should always be made before sailing offshore.

The survey report is not to be considered an inventory or a warranty, either specified or implied.

The mandatory standards promulgated by the United States Coast Guard (USCG), under the authority of Title 46 United States Code (USC); Title 33 and Title 46 Code of Federal Regulations (CFR), the voluntary standards and recommended practices developed by the American Boat and Yacht Council (ABYC), and the standards of the National Fire Protection Association (NFPA), will be used as guidelines in the conduct of this survey, but complete compliance with such standards is not guaranteed.
